

POLLINATOR KIT INFORMATION

Nursery open to the public Saturdays 10 am – 4 pm or by appt.

Thank you for your interest in the pollinator kit we are offering at Stillwater Natives Nursery! Here are some things to help you choose whether this kit is right for you.

You Receive:

Your kit will have 3 native flowering shrubs (2 gal container), 9 potted perennial flowers of three different species, 3 potted groundcover of one species and a packet of a custom blend of 12 species, annual and perennial native seeds, to scatter in the Fall when you plant. All plant species are chosen for the appropriate amount of sunlight in your garden. A planting guide is included to help you decide where to place plants; space required and plant heights.

You Provide:

The right place, a prepared bed, 100-120 square feet, all vegetation removed, including grass roots, from the area. Fairly level or just slightly sloped surface is required for best results. Let us know the sunlight conditions so the applicable choices with the most adapted species are used for your kit. Make a deposit now and pick up your kit after October 15th to plant by winter, 2021.

These locally grown natives offer the habitat needed for bees, butterflies and birds and will add beauty to your yard while providing wildlife with nectar, pollen, shelter and reproduction sites. All of the shrubs and flowers are low maintenance and drought tolerant, once established. Species have been chosen for their high value to pollinators.

This kit represents a savings of 15% at Stillwater Natives compared to pricing plants individually. We are happy to answer any questions about the plants and help you make your decision about a kit. Availability is limited by the supply of plants on hand at our nursery. For a deposit of \$45.00, we will hold your kit for you to pick up any time after October 15th, 2020. Need more information? Call 541-260-2182, leave message.
